PRESS RELEASE

**STEYR MOTORS newly developed “EDS” emergency drive system**

is a ***mechanical emergency drive system*** for STEYR Motors’s electronically controlled marine diesel engines.

This sophisticated mechanical device gives the boat owners the opportunity to engage a mechanical rack mover by a shifting cable in case of emergency. This can be for example a complete breakdown of the board electric system including engine and engine control panel. Finally the STEYR engine will run the boat home on a safety mode.

For the time being there is no other electronically controlled marine engine besides STEYR MARINE Diesel engines on the market which offers this feature. The EDS guarantees the highest safety standard and makes you independent from any other complicated additional propulsion system.

This STEYR option has been developed specifically to satisfy the highest requirements of life and rescue boat builders for their SOLAS related products. There is also a high demand and many inquiries from leisure boat builders and blue water sailboat owner who want to offer the maximum safety available on the market.

STEYR “EDS” is worldwide unique and available for the whole range of STEYR Marine Diesel 4 and 6 cylinder engines, based on Monoblock and High Pressure Unit Injectors fully developed by STEYR MOTORS Engineering.

It is representing the most innovative and professional backup solution for all kind of applications for commercial and leisure boat operation.

***It is a good feeling to have a STEYR on board ... developed for your own SAFETY***
