PRESS RELEASE

STEYR MOTORS GmbH and SuperFlush Systems announce the STEYRFLUSH

STEYR diesel engines are a synonym for most modern technologies, carefully engineered and manufactured as a typical representative of Austria's worldwide image for engine engineering & technology. They are known for their high performance, light weight, and excellence in engineering and design. All Steyr Marine Engines are manufactured using high developed grey cast iron for their unique monoblock designs as well as the best in corrosion resistant materials for the raw water cooling system.

Now with the addition of the incredible new **SteyrFlush** Marine Engine Flushing System by SuperFlush Systems America, STEYR MOTORS takes corrosion protection to unprecedented heights unequalled by any manufacturer.

"I have installed and tested the SuperFlush system for many years, and can verify the amazing results," said Rich Alley, General Manager of STEYR MOTORS NORTH AMERICA. "There's nothing like it. It greatly increases the life expectancy of all engine parts exposed to salt water, and significantly reduces breakdowns and maintenance costs of operating in ocean water. And to top that, it's 100% environmentally friendly, with a ZERO CARBON FOOTPRINT!"

"We are proud to offer the SteyrFlush system as an option for every 2009 engine sold, and as an easily installed kit engines already in the field," adds Rudolf Mandorfer, President and CEO of STEYR MOTORS. It will be offered worldwide through the STEYR MOTORS distributor and dealer network. This is the most convenient marine engine flushing system I have ever seen. The flushing takes only 5 minutes, with your boat in or out of the water."

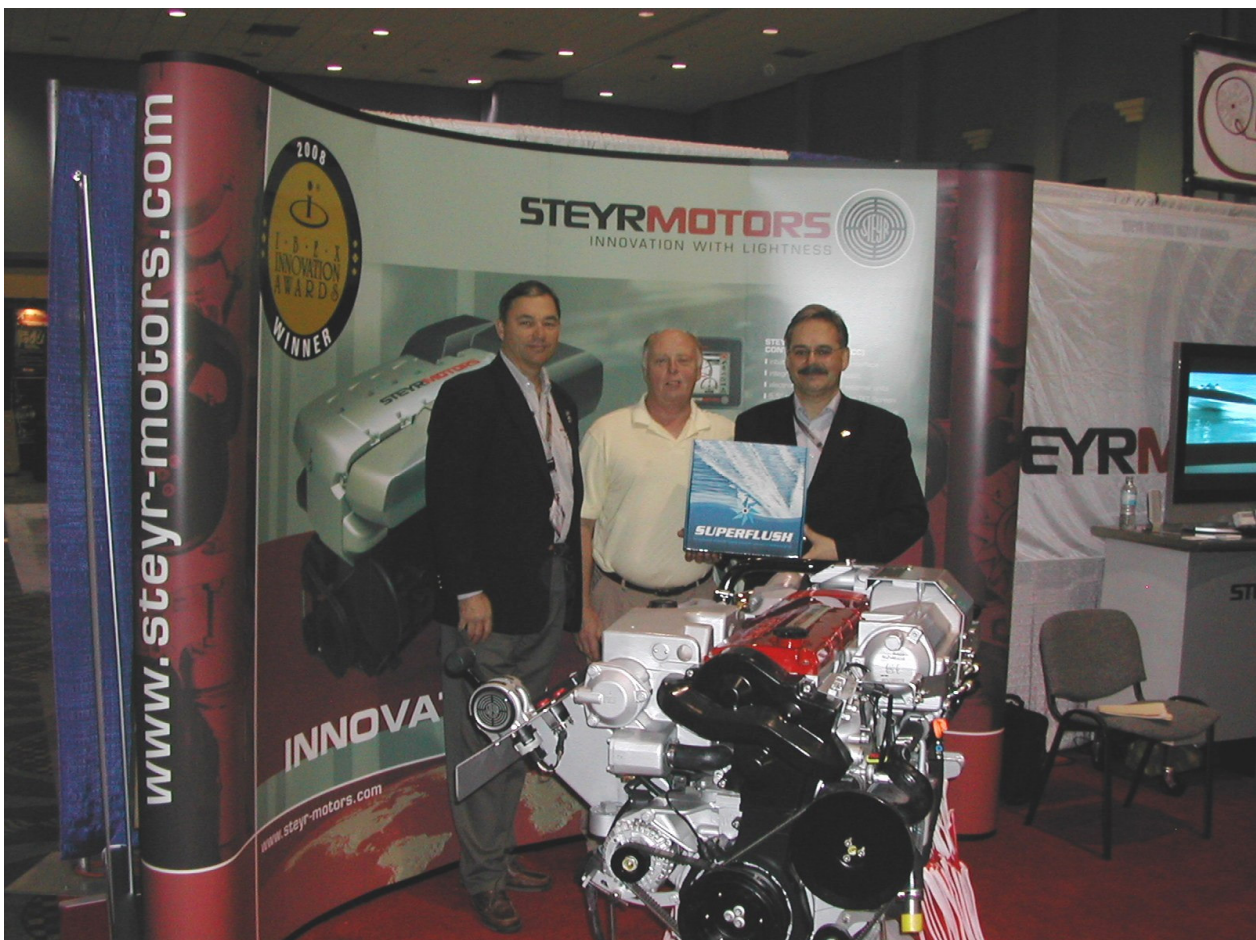

Douglas Brogdon, President and CEO of SuperFlush Systems America:, "We are especially proud of this relationship with STEYR MOTORS. Steyr has been around for 100 years and represents a dedication to the finest engineering and manufacturing principles in the world. Our company builds the best marine engine flushing systems for every brand of outboard, stern drive, inboard and diesel marine engine in the world so this partnership is an excellent fit."

The kit contains everything needed for installation on any Steyr engine product. The average installation time is under 2 hours.
